

Watershed Symposia

March 15th 9am-5pm

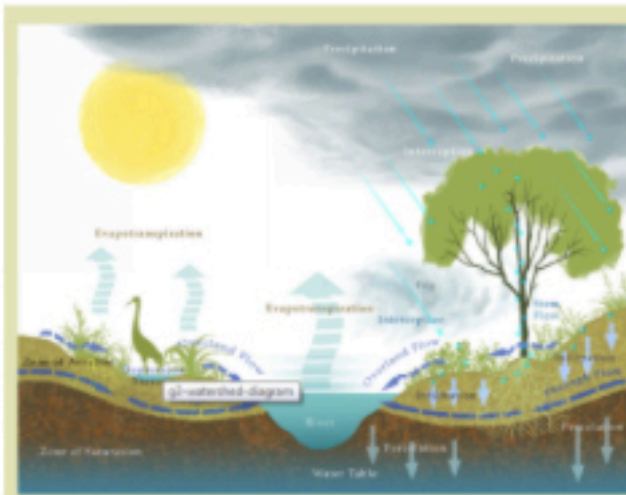

CPS Westminster

1105 W. 122nd Ave Westminster

A Watershed Approach to Landscape Design

Water conservation is no longer just about "losing the thirsty lawn" and reducing irrigation. Join us to find out how to create drought resilient landscapes that conserve water, reduce pollution, invite habitat, and are just plain gorgeous! Lunch is included. The morning session will cover six key concepts in using a watershed approach to create professional designs that use resources wisely and look beautiful year-round. The afternoon will be an interactive workshop for designing a successful watershed wise landscape design where we will learn through hands-on design in groups.

What is the Watershed Approach to Landscaping?

Your front yard is where you meet the global environment. Design, install, and manage your landscape using the Watershed Approach. The result is a gorgeous living space that functions as a healthy mini-watershed, sequestering atmospheric carbon, preventing water and air pollution, restoring the hydration and life of the soil, and attracting essential life into the garden. Making your landscape Watershed Wise is no more expensive or difficult than making any landscape, it just takes a little know-how and practice.

1. Build Healthy Living Soil
2. Capture Rainwater As A Resource
3. Select Local, Climate-Appropriate Plants
4. Use Highly Efficient Irrigation Only When Necessary
